

FW500J – Low-cut, EVA Sneakers Safety Shoes (S1P)

Sneakers Series

Colours Available:

The FW500J is an innovative safety shoe designed for professionals who require both comfort and robust protection in challenging work environments.

Upper: The shoe features a knitting mesh nylon upper that ensures breathability and flexibility, adapting to your foot for enhanced comfort during long hours.

Lining: Inside, the black BK mesh lining promotes excellent moisture management, keeping your feet dry and comfortable throughout the day.

In Sock: The in-sock combines high-density poly with BK mesh, providing superior cushioning and ventilation, which helps reduce fatigue during extensive wear.

Insert Plate: A Kevlar insert plate is included for puncture resistance, safeguarding your feet against sharp objects common in construction and industrial settings.

Toecap: The FW500J is equipped with a steel toecap that provides protection against impacts of up to 200 joules, ensuring your toes are safe from heavy falling objects.

Sole: The sole is crafted from lightweight EVA, offering exceptional shock absorption and durability, making it perfect for those on their feet for extended periods.

Standard: Compliant with S1P safety standards, the FW500J is a reliable choice for workers in various industries, combining safety features with comfort and style for everyday use.
